WATER SERVICE LINE MATERIAL INSPECTION

The Village is planning to replace the water mains in your neighborhood starting on May 8th. The project is expected to be completed by September 15th. As part of the water main project, the Village will be replacing the Village owned portion of your water service line with a 1 ½” copper line. The Village portion of the water service line is defined as the section of the service line from the water main to the B-box, which is usually located near your property line. Please see the graphic below for ownership information.

Our records indicate that your portion of the service line from the B-box to your internal plumbing may be constructed of lead. This part of the service line is private property and it will not be replaced as part of the Village’s project.

We need to determine if the service line entering your home is made of lead or copper prior to the upcoming construction. If the service line is confirmed to be lead you will be provided appropriate information on what to expect. The survey will entail a 15 - 20 minute inspection of the service line where it enters your home – i.e. the meter location. Please call Susan Kinney at 847-664-4127 to arrange for this brief inspection.
