

Construction Notice

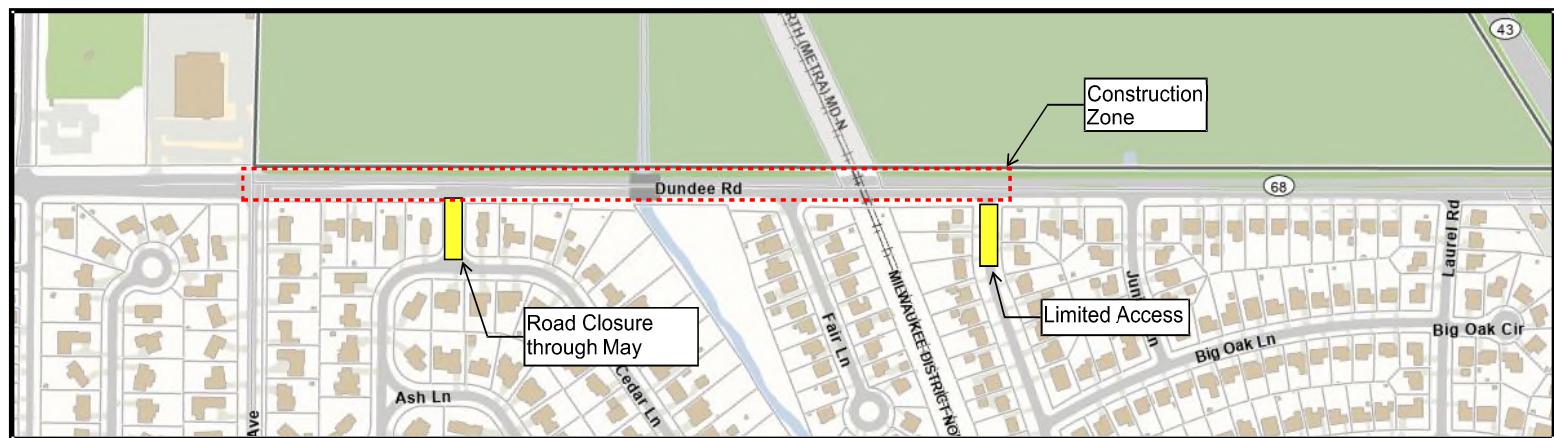

2024 Dundee Road Water Main Improvements

The Village of Northbrook will be replacing the transmission water main on Dundee Road between Western Avenue and Meadow Road. The existing water main is being replaced due to its deteriorated condition.

The Contractor will primarily be working off of Dundee Road in the southern parkway and sidewalk area to install the new water main using trenchless methods. The Contractor will connect the new water main to existing water mains at the intersections of Dundee Road and Ash Lane, Fair Lane, and Meadow Road. Throughout the project, there will be traffic disruptions at these intersections. Specifically, Ash Lane at the intersection of Dundee Road will be shutdown due to a large boring pit which is required to perform the trenchless installation of water main under the river.

Please anticipate that there will be temporary traffic delays and detours, construction noise, and dust. To perform the work, daytime lane closures will be conducted on Dundee Road using Illinois Department of Transportation traffic control standards. Additionally, the contractor will be permitted to store some equipment and materials in the parkway throughout the duration of the project.

The project is expected to begin in March and substantially completed in June 2024. Residents with questions or concerns should contact the Project Manager, Joe Petykowski, at 847-894-0064 or via e-mail at jpetykowski@baxterwoodman.com.
